

# Nuix Information Governance solutions

Powered by the patented Nuix Engine and the Nuix Luminate platform

Nuix Information Governance solutions help customers under pressure find facts fast in a sea of unstructured data

Nuix Information Governance solutions, built on the patented Nuix Engine and the Nuix Luminate platform, enable organisations to rapidly plan and execute critical IT, legal, records and privacy management and remediation projects. Nuix technology delivers the speed and scale to operate directly on large volumes of unstructured data, reducing cost and risk.

Nuix's Information Governance technology enables active governance by achieving Information Transparency™. This is the result of thoroughly and efficiently indexing unstructured information and applying workflow best practices to understand what you have and what to do with it. With deep insights into your organisation's data content and context, you can make informed governance decisions and act on them.

Where other technology firms failed to meet customer needs, Nuix's Information Governance solutions prevailed. We were honoured that our information governance solutions were voted the industry's best, ahead of those produced by other technology leaders, in two independent surveys.\*

\* Nuix was voted 'Best Information Governance Solution' by the *New York Law Journal* and the *National Law Journal*.

Simple. Powerful. Precise.

# ACHIEVE INFORMATION TRANSPARENCY™ ACROSS VAST VOLUMES OF UNSTRUCTURED DATA

If you understand the threats and opportunities contained in your organisation's data, you can make informed decisions about how much money and effort you should invest in managing it. Your data can also provide the insights you need to support or realign your business strategies.

However, facts about unstructured data – typically around 80% of an enterprise's information stores – are extremely hard to obtain in a timely, cost-effective and scalable way. This is because the volume of data has far outgrown the capabilities of traditional governance approaches to managing information.

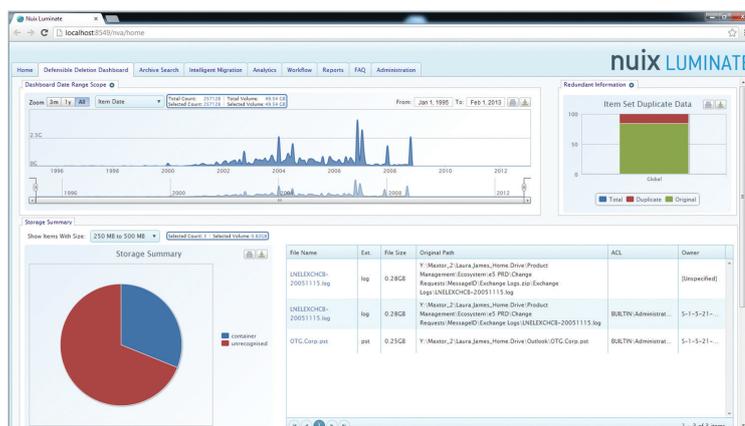

## Make informed decisions and act on them

The Nuix Engine indexes unstructured data at massive scale and with unmatched speed, providing visibility into data stored in archives, email and collaboration systems, file shares, hard drives and other common repositories. The Nuix Luminare application delivers dashboards, workflows and reports built around real-world use cases.

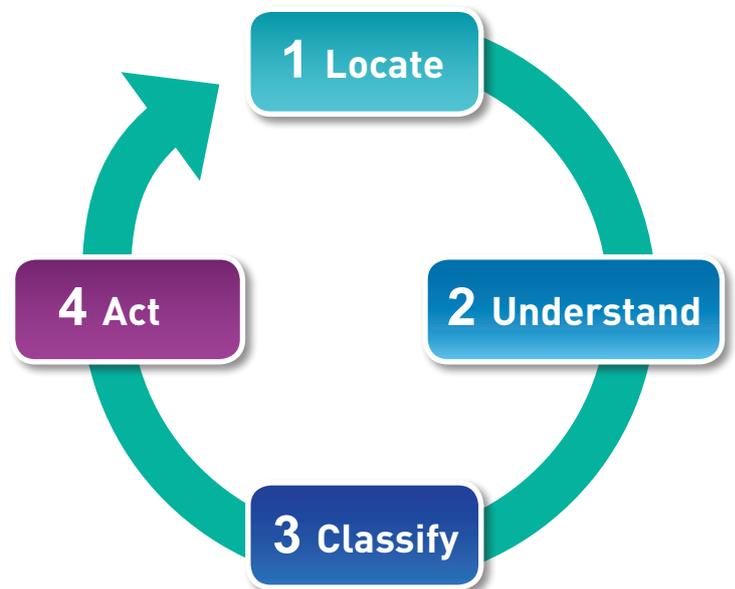

Our award-winning Information Governance solutions combine these technologies to provide:

- Critical transparency into unstructured information, enabling your organisation to develop fact-based governance strategies.
- Powerful, flexible capabilities to execute against your information governance mandates.

With our Information Governance solutions, you can make information more accessible, contain costs, mitigate risks, ensure compliance, and expedite confident and consistent responses to litigation, audits and investigations.

*The Nuix Luminare dashboard presents a high-level overview of all your unstructured data.*

## PROACTIVE INFORMATION GOVERNANCE

Nuix's technologies make it possible to govern unstructured data consistently using a four-stage process:

- 1 Locate** and identify the content and context of unstructured information scattered across myriad storage locations throughout the organisation – thus achieving Information Transparency™.
- 2 Understand** the age, ownership, format and content of each item using the unique capabilities of the Nuix Engine – making it possible to develop governance strategies.
- 3 Classify** content based on informed governance decisions that take into account the needs of all relevant stakeholders.
- 4 Act** on those decisions by optimising storage systems; classifying, migrating and protecting data; or making it more readily available to the business.

# INFORMATION GOVERNANCE SOLUTIONS

Nuix's Information Governance solutions are built around real-world use cases and delivered through specialist advisory, IT, legal and litigation support partners.

## Information Governance Assessment

Understand your data, identify risks and value and prepare a business case to prioritise, plan and justify your next steps. This is the essential first stage of any information governance initiative.

## Archive Search

Bypass legacy archives' slow and inaccurate native search to make their contents fully searchable and easy to extract for eDiscovery, regulatory requests and other business purposes.

## Information Risk Assessment

Locate personally identifiable information, personal health information, credit card numbers and other high-risk data stored 'in the wild' without appropriate encryption or access controls.

## Intelligent Migration

Understand the contents of legacy archives and file shares, migrate them rapidly to the cloud or next-generation storage systems and leave behind duplicate, outdated and trivial data that has no business value.

## File Share Clean-up

Eliminate up to half the content in file shares including data that is outdated, duplicated, not business related, or hasn't been accessed for years. This enables you to better balance the cost of storing information with its business value.

## File Share to SharePoint Migration

Migrate useful company records to Microsoft SharePoint or other enterprise content and records management systems. This includes content that many people access or that you have regulatory requirements to retain.

## Litigation Readiness

Proactively manage unstructured data repositories to eliminate junk and increase the accessibility of useful information. This will reduce the cost, time and effort involved in future litigation case assessment, discovery, review and production.

## Merger, Acquisition and Divestiture Support

Provide assurance for information assets and maintain confidence before a transaction, and afterward leverage acquired information and divest assets you no longer own.

## A UNIQUE TECHNOLOGY ADVANTAGE

Nuix software makes timely and cost-effective information governance a reality by delivering:

- The ability to thoroughly index up to 100 million emails and documents per day even in complex storage systems such as email archives.
- A light metadata scan that enables you to quickly triage tens of terabytes of data, thus targeting your efforts right away.
- In-depth data analysis including entity extraction, fingerprinting, file true typing, and access control list capture and review.
- Dashboards and reports you can use to pinpoint threats and opportunities, and gain internal support for action.

	Category	Type	Count	Volume
	Personal Information	Personal ID # in email	37	37.23 mb
	Personal Information	Credit card # in external email	1	24 kb
	Personal Information	Personal ID # in external email	12	0.19 gb
	Personal Information	Credit card # in file with open ACLs	0	0 kb
	Personal Information	Personal ID # in file with open	0	0 kb

## BUSINESS BENEFITS

With Nuix, your organisation can develop and execute information governance programs that:

- Improve and align business processes by making unstructured information more accessible, searchable and useful across the organisation.
- Contain costs by optimising data storage and disposing of information that has no current business value.
- Mitigate risks by protecting vital information while identifying and managing potentially dangerous data.
- Ensure compliance by securing private and other risky data, and consistently enforcing retention rules.
- Expedite confident and consistent responses to litigation, audit and investigation.

## CASE STUDY: NUIX INFORMATION GOVERNANCE IN ACTION

A Fortune 500 company with more than 7000 employees globally embarked on an enterprise-wide initiative to improve collaboration and get better control of unstructured content in its storage systems. A critical part of this project was identifying documents related to new product development and migrating them to a Microsoft SharePoint collaboration system. Across approximately 10 terabytes of file share data, the gold mine the company sought was 10% of documents related to product development.

Working with a major content management consultancy, the company used Nuix Information Governance tools to index the file share data, understand its contents, classify the product development documents and migrate them to the SharePoint system.

By applying Nuix's Information Transparency™ capabilities, the company was able to:

- Create a migration strategy closely aligned to its business needs because it was based on evidence found in the existing content.
- Identify and prioritise very high-value content that was frequently accessed or modified by multiple users, or was duplicated across functions.
- Extract detailed metadata from documents and tag the extracted files with this information to streamline the process of importing them into SharePoint.
- Eliminate large numbers of duplicated, irrelevant and low-value documents from the migration.

## ABOUT NUIX

Nuix is a worldwide provider of information management technologies, including eDiscovery, electronic investigation and information governance software. Nuix customers include the world's leading advisory firms, litigation support providers, enterprises, government departments, law enforcement agencies, and all of the world's major corporate regulatory bodies.
